- Sivers angle: $\Phi_{\text{Sivers}} = \phi_h - \phi_S$

- DIS cuts:

- $Q^2 > 1 \text{ (GeV/c}^2\text{)}^2$
- $0.1 < y < 0.9$
- $0.003 < x < 0.7$
- $W > 5 \text{ GeV/c}$

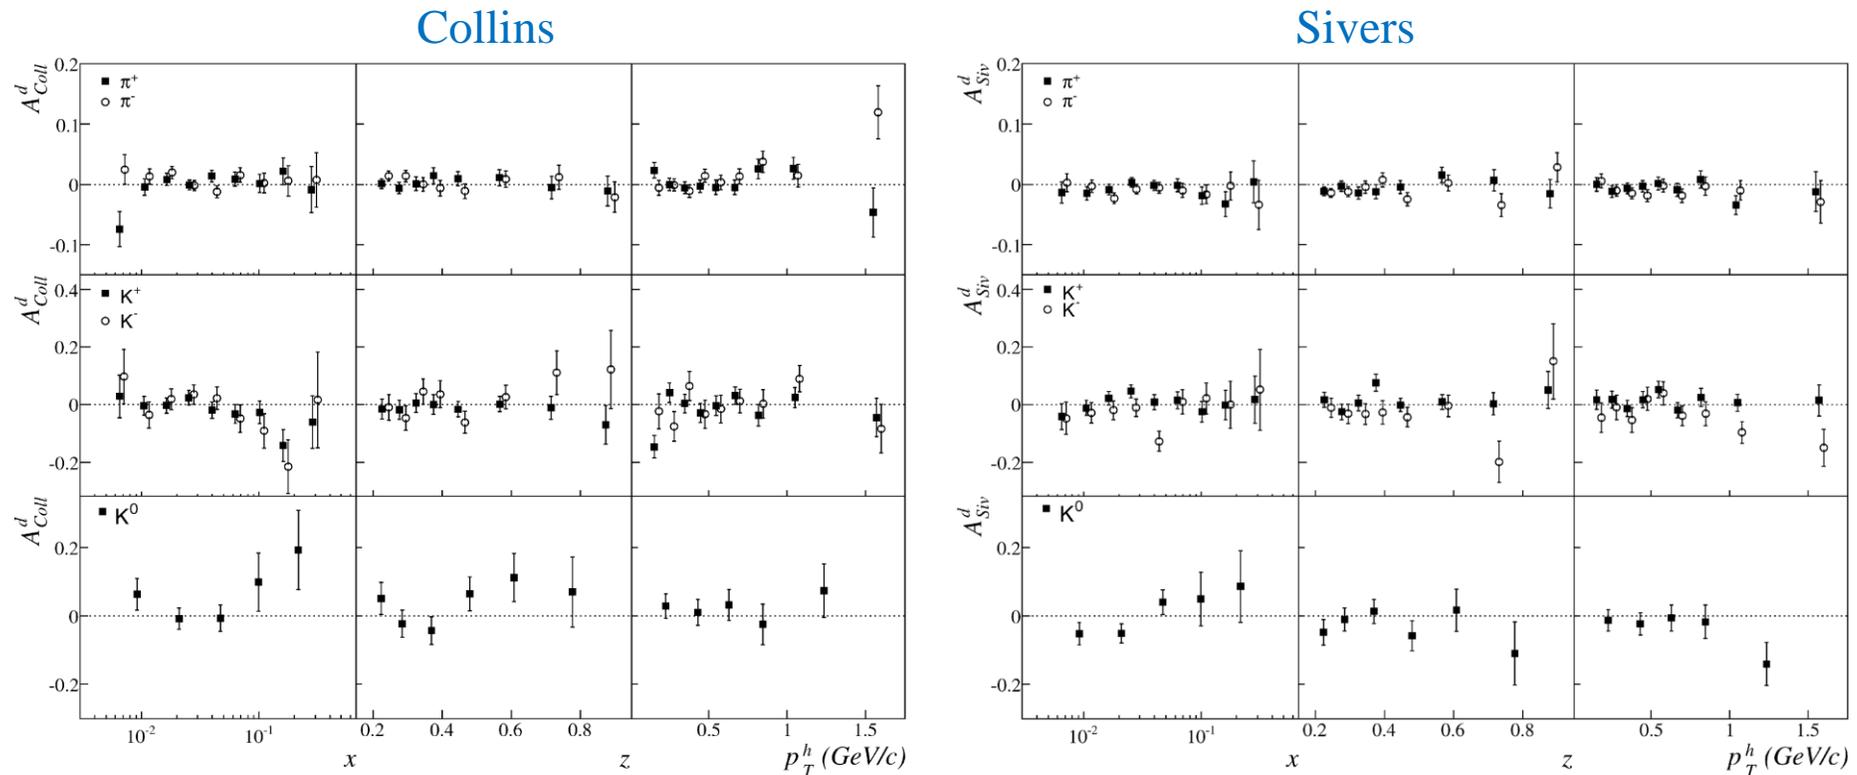

- Hadron cuts:

- $z > 0.2$ ($z > 0.1$)
current fragmentation region
- $P_T > 0.1 \text{ GeV/c}$
sufficient angular resolution

COLLINS AND SIVERS EFFECTS (DEUTERON 2002-2004)

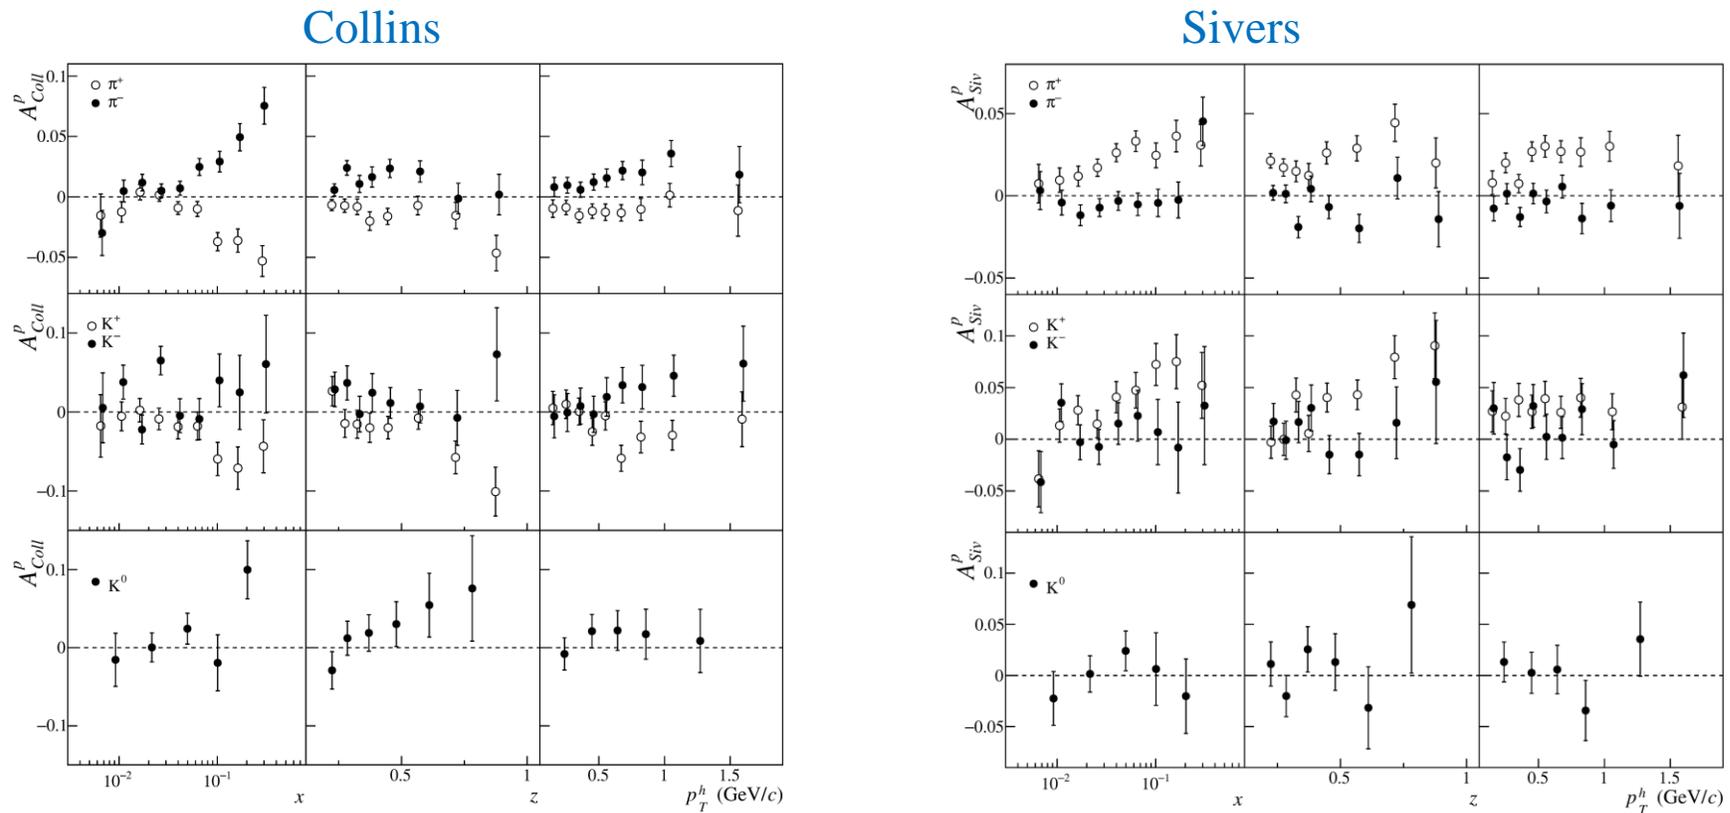

- 1st COMPASS deuteron measurements 2002-2004 (the only existing transverse deuteron target data up to 2022)
- Collins and Sivers asymmetries compatible with zero within uncertainties.

COMPASS PLB 673 (2009) 127

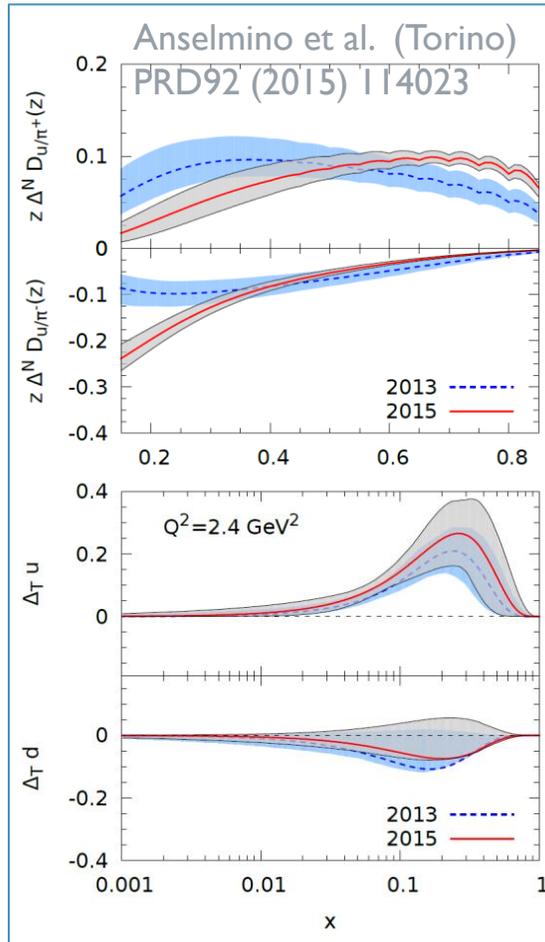

COLLINS AND SIVERS EFFECTS (PROTON-2010)

- COMPASS proton measurements – clear non-zero signal for both asymmetries (similar to HERMES measurements)

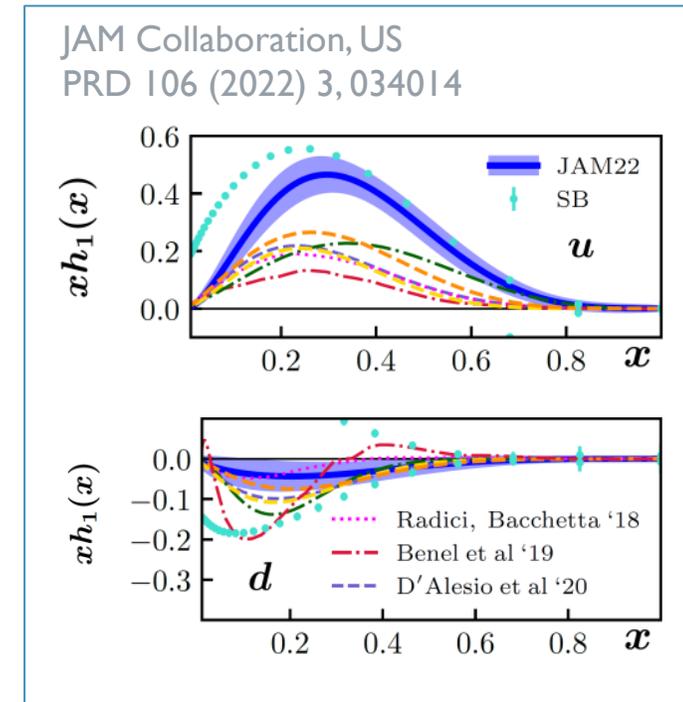

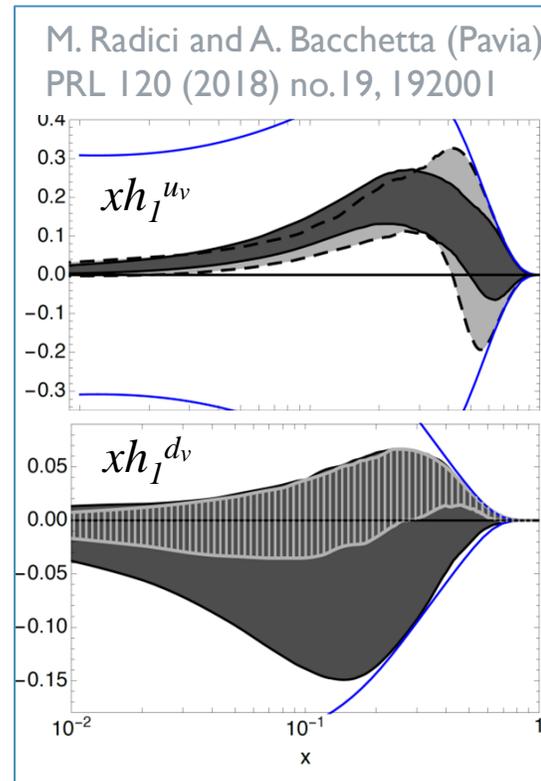

COMPASS PLB 744(2015)250

TRANSVERSITY PDF FROM GLOBAL PHENOMENOLOGICAL FITS

- Large uncertainties for the d-quark transversity
 - More deuteron (or neutron) data needed to better constrain the PDF(s)

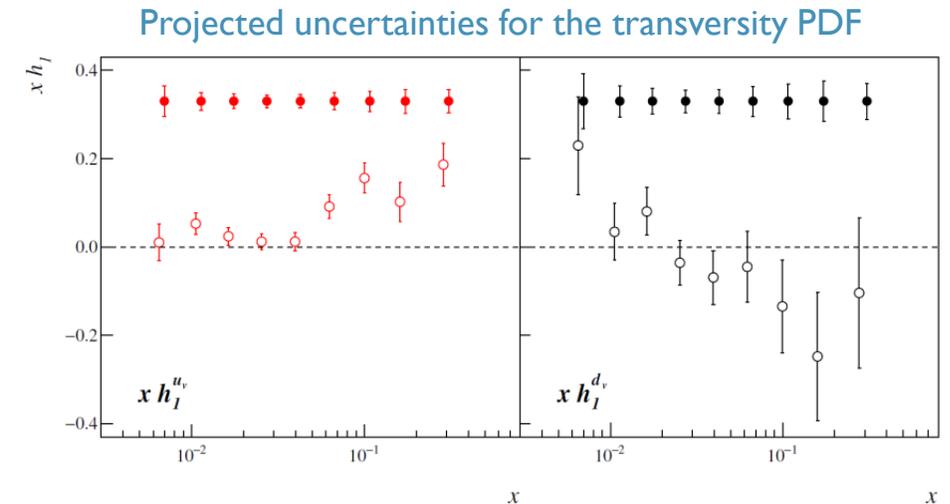

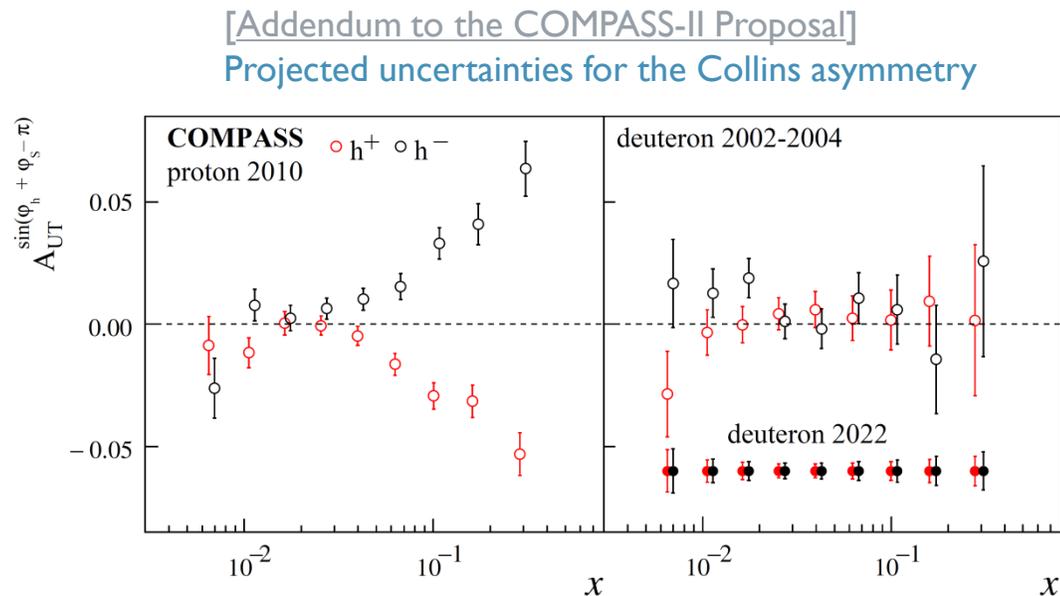

- A number of global phenomenological fits by different groups

ADDENDUM TO THE COMPASS-II PROPOSAL

COMPASS-II (2022)

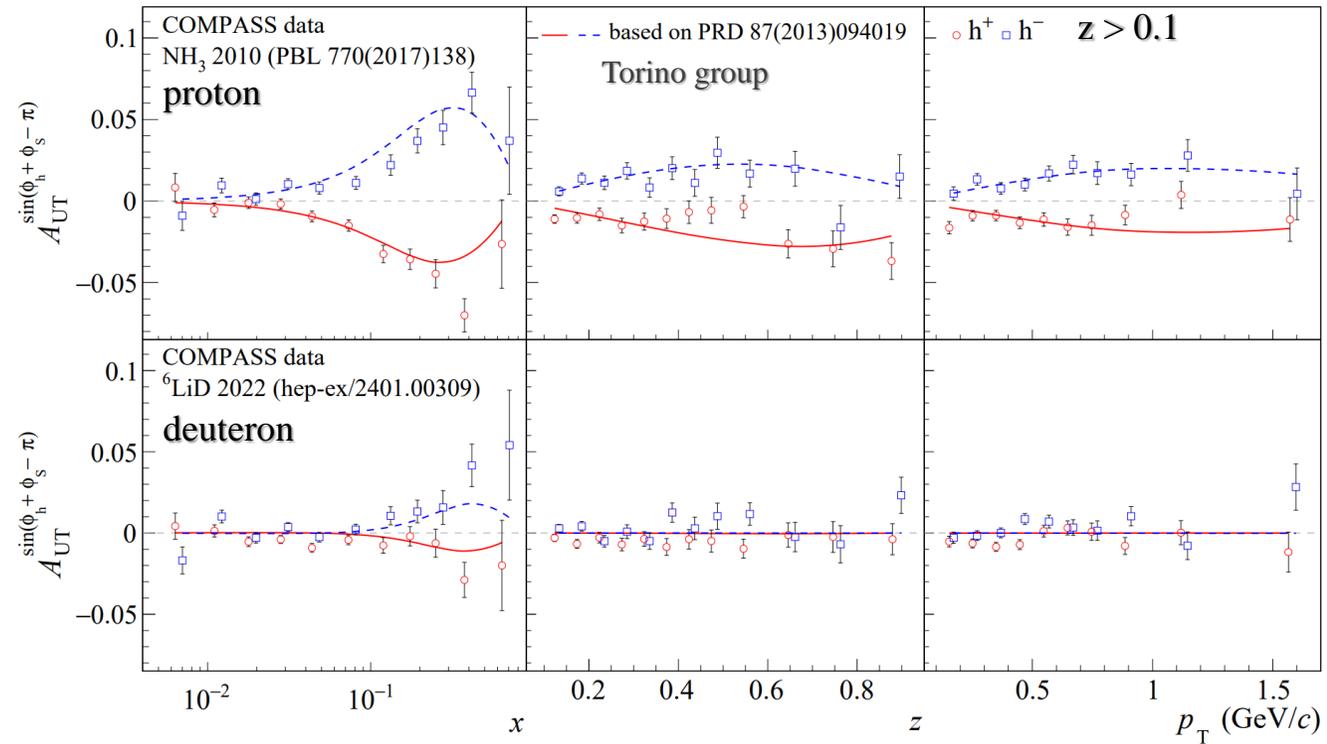

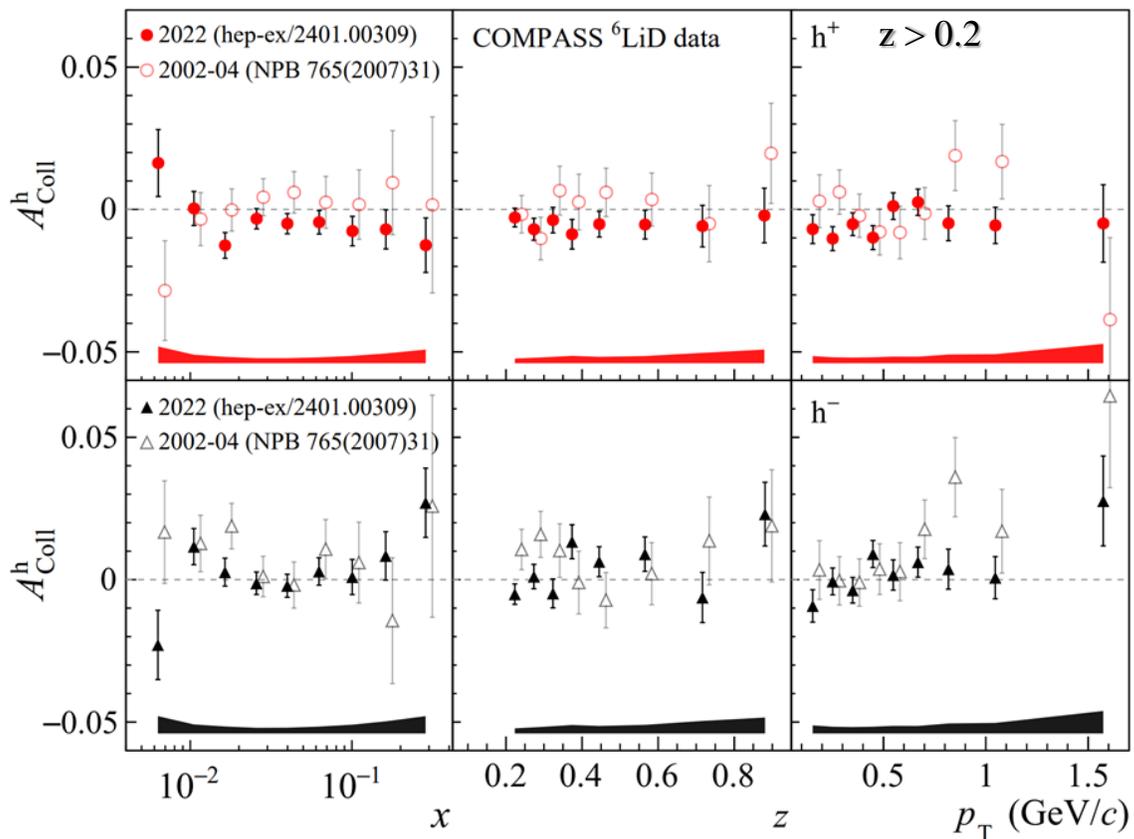

- 2nd series of COMPASS transverse deuteron measurements performed
- Crucial to constrain the transversity TMD PDF for the d-quark

- Significant improvement expected also for the u-quark transversity PDF
- Important input for Sivers and other TMDs

COLLINS ASYMMETRY

$$A_{UT}^h \sin(\phi_h + \phi_s) \propto h_1^q \otimes H_{1q}^{\perp h}$$

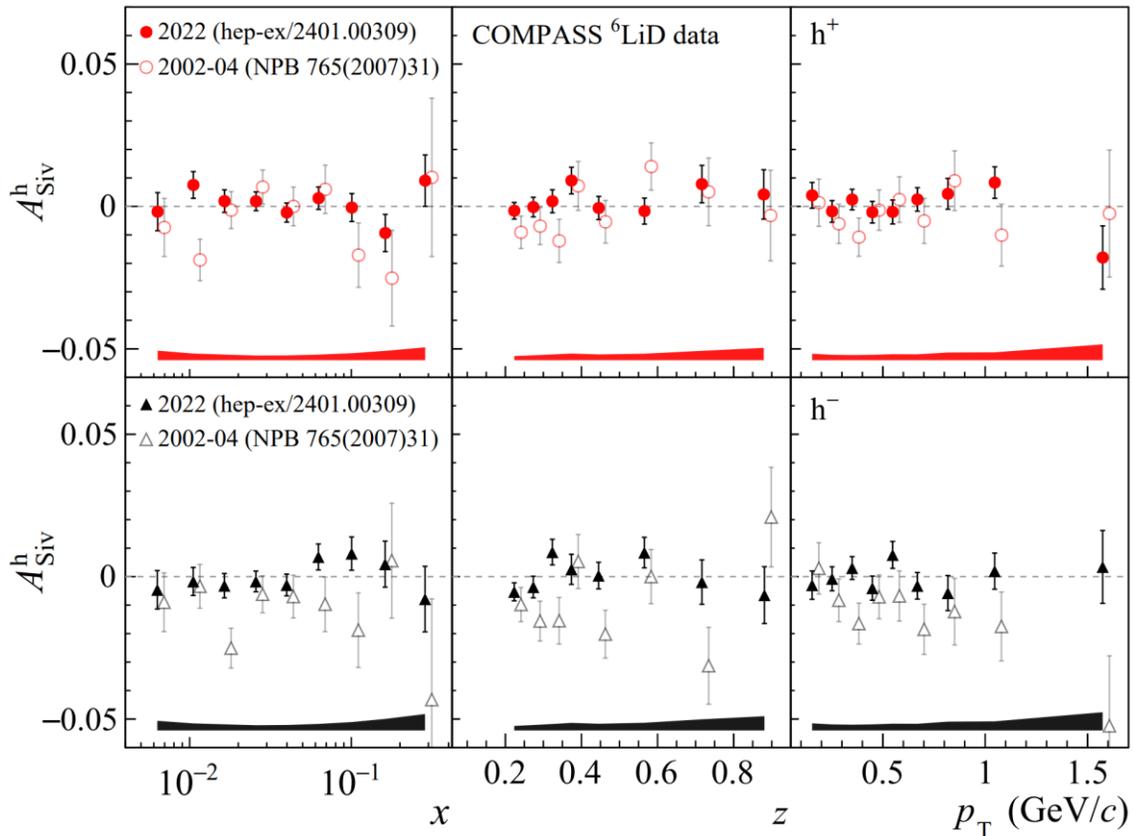

New and very precise deuteron data!

Original parametrization (for pions) extended to the low z range

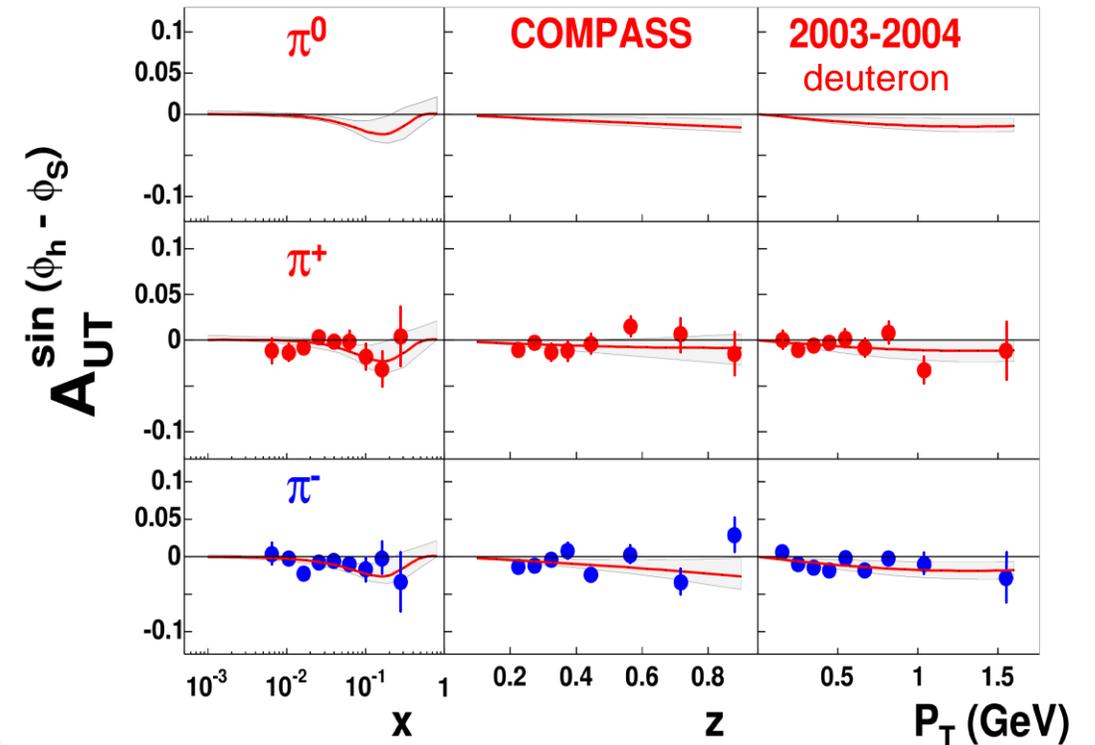

Qualitative agreement, effect at large x

SIVERS ASYMMETRY

$$A_{UT}^{\sin(\phi_h - \phi_s)} \propto f_{1T}^{\perp q} \otimes D_{1q}^h$$

S. Melis et al. (Torino) 2010

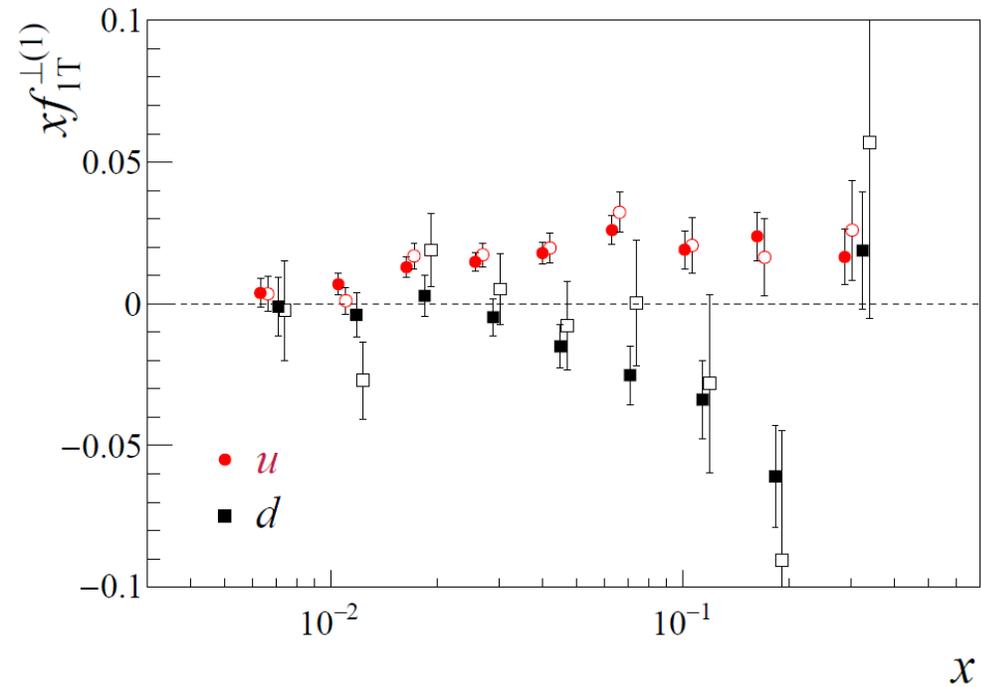

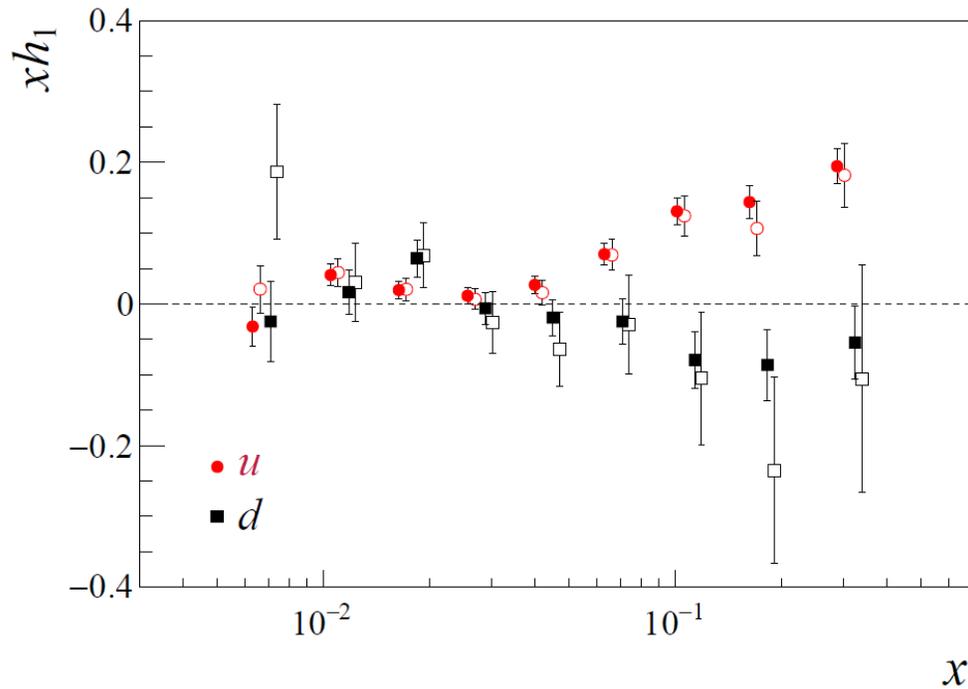

Highly improved precision, important input for the models
 The asymmetry is expected to be small

TRANSVERSITY AND SIVERS FUNCTIONS

$$A_{UT}^{\sin(\phi_h + \phi_s)} \propto h_1^q \otimes H_{1q}^{\perp h}$$

$$A_{UT}^{\sin(\phi_h - \phi_s)} \propto f_{1T}^{\perp q} \otimes D_{1q}^h$$

Overall precision improves by up to a factor of three!

$$\frac{\alpha^2}{2\pi Q^2 y} \left((1-y + \frac{y^2}{2}) \sum_q e_q^2 f_1^q(x) D_{1,q}(z, M_{hh}^2, \cos \theta) + \right.$$

$$\left. S_{\perp}(1-y) \sum_q e_q^2 \frac{|\mathbf{p}_1 - \mathbf{p}_2|}{2M_{hh}} \sin \theta \sin \phi_{RS} h_1^q(x) H_{1,q}^{\triangleleft}(z, M_{hh}^2, \cos \theta) \right)$$

Alternative way to access transversity PDF (collinear approach)

Highly improved precision, signal at large x

CONCLUSIONS

- **New high-statistics COMPASS results for the Collins and Sivers asymmetries of charged (di-)hadrons with deuteron target**
 - Measured from part (~70%) of the SIDIS data collected in 2022
 - The asymmetries are evaluated as a function of x , z or P_T
- Consistent with the previously published deuteron results
- The overall precision is improved by up to a factor of three.
- Point-to-point extraction of the transversity and Sivers functions for u and d valence quarks.
 - Clearly demonstrates the improvement at the level of the PDFs
- These new COMPASS deuteron results are expected to have strong impact on the knowledge of the transverse-spin structure of the nucleon.
- COMPASS analyses performed on the proton data are currently being repeated for the deuteron.
 - **More deuteron results from COMPASS to come, stay tuned!**
